### 技术规格

<b>Background:</b>	Calcium-binding protein 39-like is a protein that in humans is encoded by the CAB39L gene. CAB39L (calcium binding protein 39-like), also known as MO25L (MO25-like) or MO2L, is a 337 amino acid protein that is similar to MO25 and is found in the serum of nearly half of all patients diagnosed with acute monocytic leukemia. This suggests a role for CAB39L in carcinogenesis.
