技术规格

Background:	The protein encoded by this gene belongs to the calcium channel beta subunit family. It plays an important role in the calcium channel by modulating G protein inhibition, increasing peak calcium current, controlling the alpha-1 subunit membrane targeting and shifting the voltage dependence of activation and inactivation. Alternative splicing occurs at this locus and three transcript variants encoding three distinct isoforms have been identified.
Applications:	ELISA, IHC
Name of antibody:	CACNB1
Immunogen:	Fusion protein of human CACNB1
Full name:	calcium voltage-gated channel auxiliary subunit beta 1

Synonyms:	CAB1; CCHLB1; CACNLB1
SwissProt:	Q02641
ELISA Recommended dilution:	5000-10000
IHC positive control:	Human brain
IHC Recommend dilution:	50-200
