ZYX 抗原(重组蛋白)

- 中文名称: ZYX 抗原(重组蛋白)
- 英文名称: ZYX Antigen (Recombinant Protein)
- 别名: zyxin; ESP-2; HED-2
- 相关类别: 抗原
- 储 存: 冷冻(-20℃)

概述

Fusion protein corresponding to a region derived from 373-572 amino acids of human ZYX

技术规格

Full name:	zyxin
Synonyms:	ESP-2; HED-2
Swissprot:	Q15942
Gene Accession:	BC008743
Purity:	>85%, as determined by Coomassie blue stained SDS-PAGE
Expression system:	Escherichia coli
Tags:	His tag C-Terminus, GST tag N-Terminus
Background:	Focal adhesions are actin-rich structures that enable cells to a dhere to the extracellular matrix and at which protein comple xes involved in signal transduction assemble. Zyxin is a zinc-bi nding phosphoprotein that concentrates at focal adhesions an d along the actin cytoskeleton. Zyxin has an N-terminal prolin e-rich domain and three LIM domains in its C-terminal half. T he proline-rich domain may interact with SH3 domains of pro teins involved in signal transduction pathways while the LIM d omains are likely involved in protein-protein binding. Zyxin m

ay function as a messenger in the signal transduction pathwa y that mediates adhesion-stimulated changes in gene expressi on and may modulate the cytoskeletal organization of actin b undles. Alternative splicing results in multiple transcript variant s that encode the same isoform.
