技术规格

Background:	This gene encodes a member of the RecA/Rad51-related protein family that participates in homologous recombination to maintain chromosome stability and repair DNA damage. This gene functionally complements Chinese hamster irs1SF, a repair-deficient mutant that exhibits hypersensitivity to a number of different DNA-damaging agents and is chromosomally unstable. A rare microsatellite polymorphism in this gene is associated with cancer in patients of varying radio sensitivity.
Applications:	WB, IHC
Name of antibody:	XRCC3
Immunogen:	Synthesized peptide derived from Internal of human XRCC3.
Full name:	X-ray repair complementing defective repair in Chinese
