技术规格

Background:	Vesicle mediated protein sorting plays an important ro le in segregation of intracellular molecules into distinct organelles. Genetic studies in yeast have identified mo re than 40 vacuolar protein sorting (VPS) genes involved in vesicle transport to vacuoles. This gene encodes the human ortholog of yeast Vps41 protein which is a lso conserved in Drosophila, tomato, and Arabidopsis. Expression studies in yeast and human indicate that the is protein may be involved in the formation and fusion of transport vesicles from the Golgi. Several transcript variants encoding different isoforms have been des cribed for this gene, however, the full-length nature of not all is known.
Applications:	ELISA, IHC
