技术规格

Background:	This gene belongs to the subfamily of ubiquitously expressed heterogeneous nuclear ribonucleoproteins (hnRNPs). The hnRNPs are nucleic acid binding proteins and they complex with heterogeneous nuclear RNA (hnRNA). These proteins are associated with pre-mRNAs in the nucleus and appear to influence pre-mRNA processing and other aspects of mRNA metabolism and transport. While all of the hnRNPs are present in the nucleus, some seem to shuttle between the nucleus and the cytoplasm.
Applications:	WB, IHC, IF
Name of antibody:	HNRNPD(Phospho-Ser83)
Immunogen:	Peptide sequence around phosphorylation site of Serine 83(N-S-S(p))

	-P-R) derived from Human hnRPD .
