技术规格

Background:	This receptor binds insulin-like growth factor with a high affinity. It has tyrosine kinase activity. The insulin-like growth factor I receptor plays a critical role in transformation events. Cleavage of the precursor generates alpha and beta subunits. It is highly overexpressed in most malignant tissues where it functions as an anti-apoptotic agent by enhancing cell survival. Alternatively spliced transcript variants encoding distinct isoforms have been found for this gene.
Applications:	IHC
Name of antibody:	IGF1R(Phospho-Tyr1346)
Immunogen:	Peptide sequence around phosphorylation site of tyrosine 1346(Q-P-Y(p)-A-H) derived from Human IGF1R .

Full name:	insulin-like growth factor 1 receptor
Synonyms :	IGFR; CD221; IGFIR; JTK13
SwissProt:	P08069
IHC positive control:	Human brain tissue
IHC Recommend dilution:	50-100
