	Integrins are heterodimeric proteins made up of alpha and beta subunits. At least 18 alpha and 8 beta subunits have been described in mammals. Integrin family members are
Background:	membrane receptors involved in cell adhesion and recogniti on in a variety of processes including embryogenesis, hemo stasis, tissue repair, immune response and metastatic diffusi on of tumor cells. This gene encodes a beta subunit. Multi ple alternatively spliced transcript variants which encode diff erent protein isoforms have been found for this gene.
Applications:	WB, IHC
Name of antibody:	ITGB1(Phospho-Thr789)
Immunogen:	Peptide sequence around phosphorylation site of threonine 789(V-E-T(p)-V-V) derived from Human Integrin $\beta 1$.
