技术规格

Background:	The protein encoded by this gene is part of the multimeric HBO1 complex, which possesses histone H4-specific acetyltransferase activity. This activity is required for functional replication origins and is involved in transcriptional activation of some genes. In both cases, the acetylation of histone H4 helps unfold chromatin so that the DNA can be accessed and replicated or transcribed.
Applications:	ELISA, IHC
Name of antibody:	KAT7
Immunogen:	Synthetic peptide of human KAT7
Full name:	lysine acetyltransferase 7
Synonyms:	HBO1; HBOA; MYST2; ZC2HC7
SwissProt:	O95251

ELISA Recommended dilution:	5000-10000
IHC positive control:	Human breast cancer
IHC Recommend dilution:	50-300
