技术规格

Background:	This gene encodes a member of the tumor necrosis factor rec eptor superfamily. The major ligands of this receptor include ly mphotoxin alpha/beta and tumor necrosis factor ligand superfamily member 14. The encoded protein plays a role in signalling during the development of lymphoid and other organs, lipid metabolism, immune response, and programmed cell death. Ac tivity of this receptor has also been linked to carcinogenesis. A lternatively spliced transcript variants encoding multiple isoforms have been observed.
Applications:	WB, IF
Name of antibody:	LTBR
