

## 金标记兔抗小鼠 IgG

中文名称: 金标记兔抗小鼠 IgG

英文名称: Gold-conjugated Rabbit anti-mouse IgG

相关类别: 其他二抗

储 存: 冷冻(-20℃)

标 记 物: Gold

## 技术规格

Background	Immunoglobulin G (IgG) is one of the most abundant proteins in serum with normal levels between 8-17 mg/ml in adult blo od. IgG is important for our defense against microorganisms a nd the molecules are produced by B lymphocytes as a part of our adaptive immune response. The IgG molecule has two sep arate functions; to bind to the pathogen that elicited the resp onse and to recruit other cells and molecules to destroy the a ntigen. The variability of the IgG pool is generated by somatic recombination and the number of specificities in an individual at a given time point is estimated to be 1011 variants.
Applications	1/20-100 for immunoelectron microscopy(IEM), immunogold st aining(IGS), gold immunochromatography assay(GICA)
Conjugate	Gold (15 nm)
