技术规格

Background:	This gene encodes a member of the Armadillo protein family, which function in adhesion between cells and signal transduction. Multiple translation initiation codons and alternative splicing result in many different isoforms being translated. Not all of the full-length nature of the described transcript variants have been determined. Read-through transcription also exists between this gene and the neighboring upstream thioredoxin-related transmembrane protein 2 (TMX2) gene.
Applications:	WB, IHC
Name of antibody:	CTNND1(Ab-228)
Immunogen:	Synthesized non-phosphopeptide derived from human Catenin- δ 1 around the phosphorylation site of tyrosine 2

	28 (D-N-Y(p)-G-S).
Full name:	catenin (cadherin-associated protein), delta 1
Synonyms :	CAS; p120; CTNND; P120CAS; P120CTN; p120(CAS); p120(CTN)
SwissProt:	O60716
IHC positive control:	Human brain tissue
IHC Recommend dilution:	50-100
WB Predicted band size:	108 kDa
WB Positive control:	Huvec cells lysate
WB Recommended dilution:	500-3000
