Background:	This proten can activates apoptosis.It is inhibited by DFFB and intera cts with DFFA and DFFB. It has high levels expression in liver and s mall intestine, and has lower levels expression in colon, kidney and s pleen.CideB specifically interacts with VLDL structural protein, apolipo protein B100 (apoB100), but not with albumin, a PTV cargo protein. I t can interacts with COPII components, Sar1 and Sec24
