

## NFKBID 抗原(重组蛋白)

- 中文名称: NFKBID 抗原 (重组蛋白)
- 英文名称: NFKBID Antigen (Recombinant Protein)
- 储存: 冷冻(-20℃)
- 相关类别: 抗原

概述

Fusion protein corresponding to a region derived from 1-221 amino acids of human NFKBID

## 技术规格

Full name:	nuclear factor of kappa light polypeptide gene enhancer in B-cells inhibitor, delta
Synonyms:	TA-NFKBH, IkappaBNS
Swissprot:	Q8NI38
Gene Accession:	BC006273
Purity:	>85%, as determined by Coomassie blue stained SDS-PAGE
Expression system:	Escherichia coli
Tags:	His tag C-Terminus, GST tag N-Terminus
Background:	May regulate the expression of IL-2, IL-6, and other cytokines thro ugh regulation on NF-kappa-B activity. Functions in the regulation of inflammatory responses. May also regulate TCR-induced negativ e selection of thymocytes.IκBNS, the nuclear IκB-like protein encode by Nfkbid, is required for the development of marginal zone and peritoneal B-1 B cells and additionally required for extrafollicular a ntibody responses to T-independent and -dependent immunogens.Iκ BNS has been identified as a member of the IκB family of NF-κB in ors, which undergoes induction upon TCR signaling. IκBNS mediates both positive and negative gene regulation, depending on individu al cell type and/or cytokine.
