

## STAT6 抗原(重组蛋白)

中文名称: STAT6 抗原(重组蛋白)

英文名称: STAT6 Antigen (Recombinant Protein)

储 存: 冷冻(-20℃)

相关类别: 抗原

概述

Fusion protein corresponding to a region derived from 530-847 amino acids of human STAT6

## 技术规格

Full name:	signal transducer and activator of transcription 6, interleukin-4 in duced
Synonyms:	STAT6B; STAT6C; D12S1644; IL-4-STAT
Swissprot:	P42226
Gene Accession:	BC075852
Purity:	>85%, as determined by Coomassie blue stained SDS-PAGE
Expression system:	Escherichia coli
Tags:	His tag C-Terminus, GST tag N-Terminus
Background:	The protein encoded by this gene is a member of the STAT family y of transcription factors. In response to cytokines and growth factors, STAT family members are phosphorylated by the receptor associated kinases, and then form homo- or heterodimers that translocate to the cell nucleus where they act as transcription activators. This protein plays a central role in exerting IL4 mediated bi ological responses. It is found to induce the expression of BCL2L 1/BCL-X(L), which is responsible for the anti-apoptotic activity of IL4. Knockout studies in mice suggested the roles of this gene in differentiation of T helper 2 (Th2) cells, expression of cell surface markers, and class switch of immunoglobulins. Alternative splicing results in multiple transcript variants.
