

兔抗 EVI2B 多克隆抗体

中文名称:	兔抗 EVI2B 多克隆抗体
英文名称:	Anti-EVI2B rabbit polyclonal antibody
别名:	ecotropic viral integration site 2B; EVDB; CD361; D17S376
相关类别:	一抗
储存:	冷冻 (-20℃)
宿主:	Rabbit
抗原:	EVI2B
反应种属:	Human, Mouse
标记物:	Unconjugate
克隆类型:	rabbit polyclonal

技术规格

Background:	EVI2B, also known as CD361. CD361 is a poorly characterized type I transmembrane protein, expressed from one of three genes embedded in intron 27b of the neurofibromatosis type 1 (NF1) gene. The DNA strand that is transcribed to produce CD361 is the complementary one to the strand encoding NF1. Murine homolog to human CD361 is associated with ecotropic viral insertions, which have been implicated in the expression of murine myeloid leukemias. CD361 has been also reported to be involved in melanocyte and keratinocyte differentiation. However, it is expressed mainly in peripheral blood and bone marrow.
Applications:	ELISA, IHC

Name of antibody:	EVI2B
Immunogen:	Synthetic peptide of human EVI2B
Full name:	ecotropic viral integration site 2B
Synonyms:	EVDB; CD361; D17S376
SwissProt:	P34910
ELISA Recommended dilution:	5000-10000
IHC positive control:	Human liver cancer
IHC Recommend dilution:	20-100
