|--------------------------|--|
| Background: | Apoptotic adaptor molecule that recruits caspase-8 or caspase-10 to the activated Fas (CD95) or TNFR-1 receptors. The resulting aggregate called the death-inducing signaling complex (DISC) performs caspase-8 proteolytic activation. Active caspase-8 initiates the subsequent cascade of caspases mediating apoptosis. Involved in interferon-mediated antiviral immune response, playing a role in the positive regulation of interferon signaling. |
| Applications: | WB |
| Name of antibody: | Fadd(Ab-191) |
| Immunogen: | Synthesized peptide derived from C-terminal of human FADD. |
