Background:	This gene encodes a protein that functions in multiple regulatory pathways. The encoded protein complexes with numerous cytosolic proteins and performs diverse functions including regulation of small nuclear ribonucleoprotein biosynthesis , platelet activation and cytoskeletal organization. The protein is also found associated with the plasma membrane where it functions as a chloride current regulator.
Applications:	WB
Name of antibody:	CLNS1A
Immunogen:	Synthesized peptide derived from C-terminal of human CLNS1A.
Full name:	chloride channel, nucleotide-sensitive, 1A
