技术规格

Background:	This gene encodes a member of the carboxylesterase lar ge family. The family members are responsible for the h ydrolysis or transesterification of various xenobiotics, suc h as cocaine and heroin, and endogenous substrates wit h ester, thioester, or amide bonds. They may participate in fatty acyl and cholesterol ester metabolism, and may play a role in the blood-brain barrier system. The protei n encoded by this gene is the major intestinal enzyme a nd functions in intestine drug clearance. Alternatively spl iced transcript variants have been found for this gene.
